

Which Patient to put on CPAP?

TRY CPAP!

Always perform ABC assessment
and resuscitation as needed
BEFORE beginning TRY CPAP

T

Tone is good

R

Respiratory Distress:

Pulse ox less than 90% on O₂ 1LPM

Y

Yes for HR greater than 100

Baby is breathing.
HR greater than 100,
Weight more than 1 kg

Tone is **good**
Baby is active

Tone is **poor**
Baby is floppy

No CPAP
Put on O₂ 1 L/min
if saturation is less
than 90% in room air

Weight between
1kg and 1.3 kg.
Premature less than
30 weeks

**EARLY
CPAP**

Weight is more than 1.3 kg.
RR greater than 60.
Saturation less than 90% in room air.
Retractions or grunting (with or
without)

Start O₂ 1 L/min

After 15 minutes:
Is saturation less than
90% on O₂ 1 L/min?

CPAP
